

Question:

1. Can a shift start before midnight and end after? (e.g., 23:00–01:00). Is this even a valid use case for this system?
2. If a user submits multiple entries on the same day totaling 25+ hours, should the system block it entirely, or just warn? no limit
3. If a user never stops the timer ? only save the start time
4. holiday? configure the holidays manually
5. month lock automatically in the first of the next month and if the admins want to unlock he can.

👍 ספרייה לחגים יהודיים בריאקט

npm install @hebc/cal/core react-big-calendar date-fns

6. Overlapping entries — Can a user submit two entries on the same day where the time ranges overlap? (e.g., 09:00–12:00 and 11:00–14:00). Should the system block this or just warn? No
7. Midnight crossing — Can a shift start before midnight and end after? (e.g., 23:00–01:00). Is this even a valid use case for this system? two days, the user need to enter two different shifts
8. Zero-duration entry — What if start time equals end time? Hard block or warning? NO
9. Future dates — Can an employee report hours for tomorrow or next week? Or only today and past dates? NO
10. How far back — Is there a limit on retroactive reporting beyond just "before month close"? Can someone report hours from 6 months ago if the month is still open? Nice To Have
11. More than 24 hours in a day — If a user submits multiple entries on the same day totaling 25+ hours, should the system block it entirely, or just warn? the system wont permit it
12. Browser close / crash — If the user starts the timer and closes the browser, does the timer keep running server-side? Or does it get lost? yes
13. Timer past midnight — If the timer runs past midnight, does it split into two days, stop, or just keep going? split into 2 days.
14. Multiple timers — Can a user start a timer while another is already running? Or is only one active timer allowed at a time? NO
15. Forget to stop — If a user never stops the timer (e.g., started Friday, opened the app Monday), what happens? Is there a timeout or a max duration? only save the start time' in the end of the day restart.
16. Absence on a day with existing work entry — If I already have a 9-hour work entry for Monday and then I try to report sick leave for that same Monday, what happens? Block? Replace? Warn? warning with the option to replace
17. Absence spanning a month boundary — e.g., April 28 – May 3. Does this get split into two separate records, or treated as one? split to 2 months
18. Absence on a locked month — If March is locked and the sick note arrives in April for a March absence, can the admin unlock, add it, and re-lock? Is there any special flow for this? Cant be

19. Incomplete reports at lock time — If some employees haven't reported all their days, can the admin still lock the month? Warning only, or hard block? warning
20. Active timer at lock time — If an employee has a running timer when the admin locks the month, what happens to that entry? Its cant be
21. Who can lock — Can any admin lock any month, or is it limited (e.g., only the current or previous month)? admin only
22. User deactivated mid-month — If an employee is deactivated on the 15th, do their days 1–15 still need to be reported/closed normally? need to be reported
23. User unassigned from a task — If an admin removes a user from a task they've already reported hours against, do those historical reports stay intact? yes
24. Task/project/client deactivation cascade — If a client is deactivated, do their projects and tasks automatically deactivate too? Or does the admin have to do each level manually? the admin
25. _____
26. File format and size — What file formats are allowed for sick/reserve documents (PDF only? Images too?)? Is there a max size? PDF, IMAGES, max Size - 20M
27. Wrong document uploaded — Can a user replace/delete an uploaded document, or only add more? yes, only one file
28. _____
29. Failed login attempts — Is there a lockout after X failed attempts, or is that out of scope for this course project? after 3 attempts
30. Password rules — Any minimum requirements (length, complexity), or is the initial password set by admin with no constraints? MIN - 8 , big and small letters, numbers and at least 1 characters
if there will be time add that cant be sequences
31. Admin deletes themselves — Can the last admin in the system deactivate their own account? Should there be a guard against this? yes

to be answered:

32. Locked month vs late absence documents

The PDF says sick/reserve documents can be added after the report is closed.

But you answered that absence on a locked month “can’t be”.

Question: can a user/admin upload a missing document after month lock, without changing the absence itself?

-basically if the month is locked no changes can be done afterwards

33. Timer after midnight vs manual midnight rule

You said manual shifts cannot cross midnight and must be split into two shifts.

But for timer, you said it should split automatically into 2 days.

Question: should the system auto-create the first day's timer entry at midnight, or wait until the user stops the timer?

34. Forgotten timer behavior

You answered: “only save the start time” and “end of the day restart.”

Question: if the user starts a timer and never stops it, what exactly is saved?

Example: started Monday 09:00, opens app Wednesday. Are there incomplete timer records for Monday and Tuesday, or only Monday start time?

35. Absence on same day as work

You answered: warning with option to replace.

But the PDF says partial absence can exist with work hours for the rest of the day.

Question: when should absence + work be allowed, and when should it trigger replacement?

36. Month unlock scope

The PDF says admin can reopen a locked month.

Question: does unlock reopen the month for all employees, or only for one selected employee?

37. Automatic month lock vs incomplete reports

You said month locks automatically on the 1st, and incomplete reports are warning only.

Question: if reports are incomplete, does auto-lock still happen anyway?

38. Late sick/reserve absence after month lock

You said locked month absence "can't be."

But in real life sick/reserve documents can arrive late.

Question: can admin unlock March, add March sick/reserve absence, and re-lock, or is adding absence to locked months completely forbidden?

39. More than 24 hours

First answer said "no limit," later answer said system won't permit more than 24 hours.

Question: should the system hard-block total daily reports above 24 hours?

40. Failed login lock

You answered lock after 3 failed attempts.

Question: locked for how long, and who can unlock it?

1. Last admin deactivation

You answered "yes" to the guard question.

Question: confirm: should the system block the last admin from deactivating their own account?

2. ניתן לעבוד על פרויקטים במקביל

3. ימי סופש וחגים מופיעים באפור וחסומים להזנה

4. אם דיווחתי רק פרויקט חלקי ולא על כל השעות אסור לי לסגור את היום-ומתריע

5. מותר לתת דיווחי היעדרות עתידיים בלבד עבור מחלה/מילואים

6. תקן הוא 9 שעות ביום לכולם כמובן מלבד ימי חג, חצי יום עבודה

7. יש מנהל פרויקט: עוד מעין תת אדמין שיכול להוריד אנשים ולרשום אנשים לפרויקט בלבד, ויש admin כללי
8. אדמין יכול לבחור מתי ננעל החודש

נקודות לזכור:

1. בסוף מייצאים ל LOVABLE או כל מערכת אחרת לדמות PRODUCT לראות איך המוצר נראה בסוף
2. לא לשכוח: -טסטים, ci/cd, אבטחת מידע

-לקבוע דיילי
-לזמן את עוז לג'ירה

איך לעבוד עם הפיגמה בעזרת MCP?

1. The right Figma URL with the correct node

In Figma, click the specific frame/component you want → right-click → **"Copy link to selection"**. That gives you the exact node ID.

Example of a good URL:

<https://www.figma.com/design/Gz4RUG5gAh5Tj6yYUMdSOz/...?node-id=1-9873>

2. Tell me what kind of thing it is

"It's a login page" / "It's a reusable card component" / "It's the full dashboard screen"

This helps me decide whether to create a new page, a component, or add to an existing file.

3. Tell me where to put it

"Add it as a new route/page" / "Replace the current header" / "Just create the component, don't wire it up yet"

4. Tell me if it needs real data or is static

"Use hardcoded mock data for now" / "It should fetch from the API" / "Just the UI, no logic"

Full example of a great prompt:

"Implement this Figma frame as a new page in my React app. It's the task assignment table screen. Use mock/static data for now, don't wire up the API yet. Create it as a standalone component and add it to the app so I can see it at /assignments. URL:

<https://www.figma.com/design/Gz4RUG5gAh5Tj6yYUMdSOz/...?node-id=2-4512>"

The most common mistake is copying the file URL instead of the frame URL — make sure node-id is in the link and points to the specific frame you're looking at.
